- Total duration: 2 hours (each session broadcasted thrice during the week)
- Total feedback received from 87 participants, from three different broadcasts

## Testimonials

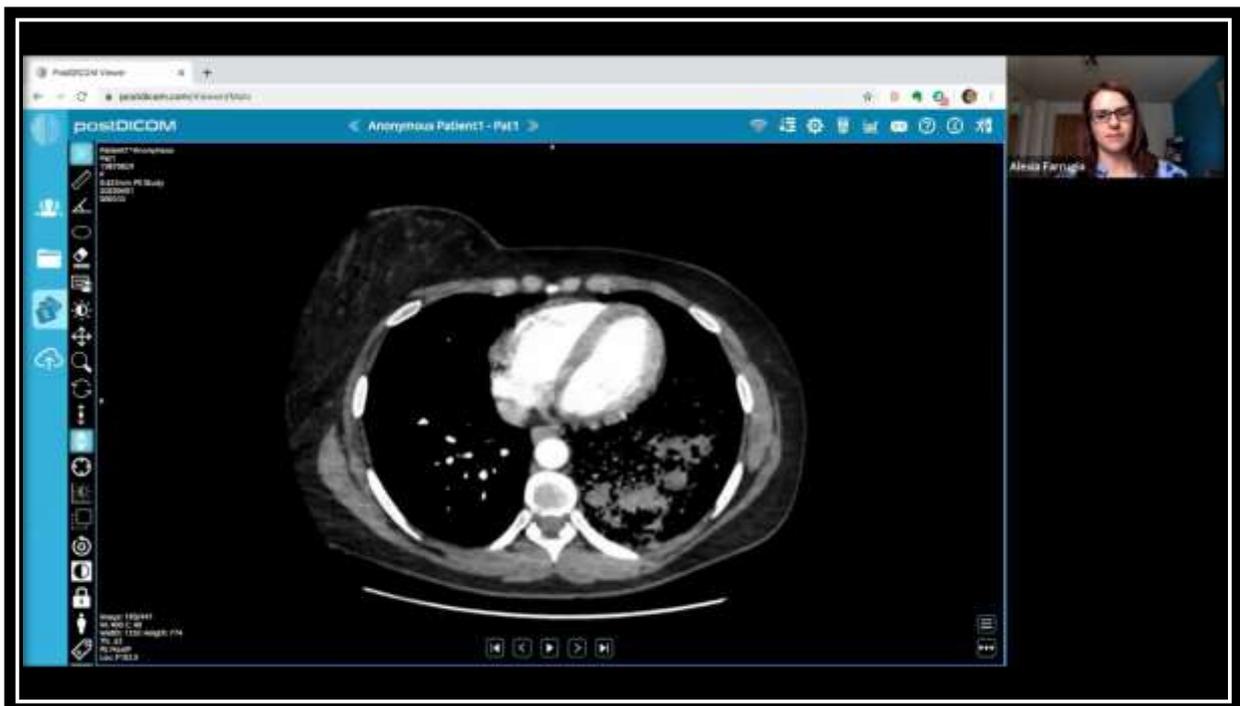

- For a person of my level with an observer status and limited knowledge, the discussion after the presentation of the case, which included a brief description of the disease and the differential, was useful. Also, the presentation of the case provides a brief insight into the art of presenting a case and the approach that different people use (Pakistan).
- Super selected cases with clear, concise feedback to candidates and clear, to-the-point take-home messages in a short-time teaching mode for each case were useful, organized, and very beneficial. Many thanks (Egypt).
- Excellent session on chest imaging, especially the selection of cases, which is of great help from the exam point of view (India).
- Excellent session: infected pulmonary sequestration and centrilobular nodules differentials were useful (South Africa).
- Extremely useful. Refreshing many long-forgotten concepts (Pakistan).
- Great cases, very kind examiner :) (UK).
- Amazing lecture and excellent clarifications (Sudan).
