Testimonials

- This lecture serves as a fundamental basis for neuroradiology. Dr. Khan provided a comprehensive overview of key concepts, detailing MRI sequences, how to distinguish between them, and how to select the optimal sequence for specific clinical cases based on the referring physician's information. He also offered a thorough explanation of essential neuroradiological conditions—such as hemorrhage and its various stages, meningeal lesions, and subarachnoid hemorrhage—along with the differential diagnosis for each presented case. The discussion on Neurofibromatosis Type 1 was equally clear and well-structured, supported by high-quality images that simplified complex concepts and illustrated the management of such cases. Many thanks to Dr. Khan for this excellent presentation (Jordan).
- Comprehensive coverage of exam-based cases that are important to focus on. Dr. Khan's explanations are extremely helpful for each case (Malaysia).
